

The Three Options for Mobile Website Design

Mobile Friendly Websites are developed so all features function the same on both a regular computer and a mobile device.
ALL WF Websites have been built this way from the beginning. THIS option is NO longer meeting Google's Recommended Guidelines.

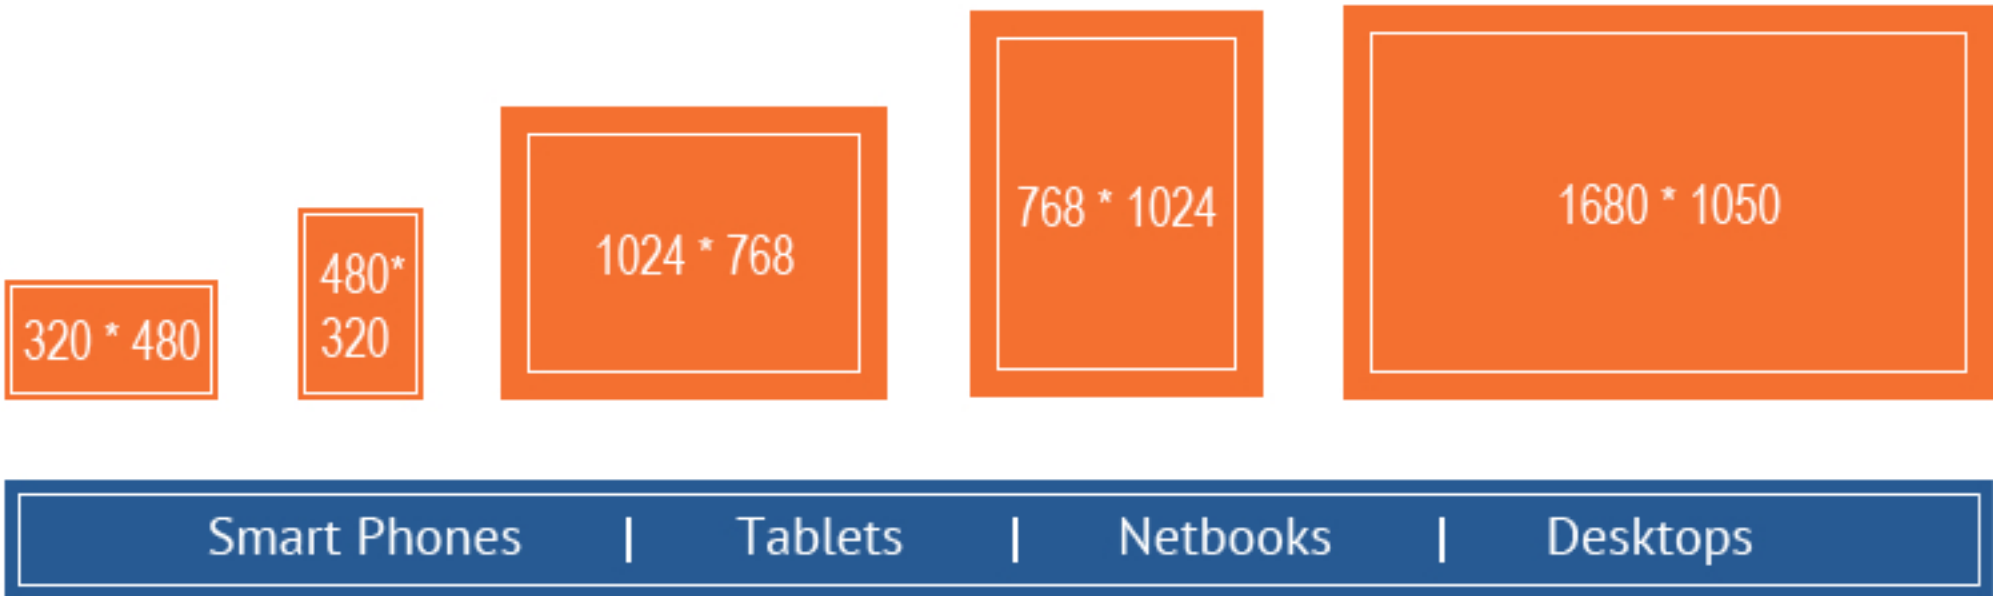

Responsive Website are developed so the site's content adjust to the screen size of the user devices.

Separate Mobile Websites are a Completely different website developed for mobile user only.

The Break Down

Mobile Device Display Resolutions

You may be asking yourself, "Why dose my mobile device display content differently from desktop?" The answer lie in the resolution at which each displays. websites displays on there devices at a fix 72 pixels per inch, the large physical size of the screen, the more pixels are displayed.

Why Should It Matter?

1 in 8
page views are from mobile devices

58%
of mobile users expect mobile sites to load as quickly as or faster than desktop sites

61%
of customers who visit a mobile unfriendly site are more likely to go to a competitor's site

75%
of customers prefer a mobile friendly site
